Correlation between Marriage Satisfaction and the Self-Relation and the Person Psychological Gender in Young Families

## Sharay, Tatiana, Review of European Studies

## **Abstract**

Timeliness of the studied problem is caused by a need to solve the problem of modern society:preservation of the family enduring a difficult stage-transition from traditional model to a new. The article is directed on research of the factors influencing the marriage satisfaction. Theleading research methods of this p roblem are: the theoretical review of the available researcheson this subject, testing, mathematical statistics methods.

The main results of research are: definition of correlation between separate ind icators of the self-

relation and marriage satisfaction; existence of male and female characteristics of t he correlationbetween self-

relation and marriage satisfaction; correlation of the male's marriage satisfactionwi th the person psychological gender characteristics. Article can be used in researches of thefactors influencing marriage satisfaction and also can be used by applied psyc hologists in thework with married couples.

Keywords: young family, marriage satisfaction, selfrelation, person psychological gender

- 1. Introduction
- 1.1 Timeliness

The modern family endures a difficult stage in the evolution-

transition from traditional model to a new, and many scientists characterize present conditions for a family as a crisis. All this, in theend, leads to the birth rate falling, divorces grow and increase in number of single persons.

According to Federal State Statistics Service in the last few years for each 1000 marriages are about 500 divorces that make 50%. That is each second marriage is br eaking up (2013).

According to researches, the greatest percent of divorces is in the marriages which lasted less than 3-

5 years (Gasparyan, 1999). Therefore recently the special attention of sociologists,d emographers, psychologists is attracted more and more to a young family.

1.2 Definition of the Key Terms

It is assumed that the young family is a family in the first 3 years after a marria ge (in case of thebirth of children-

without restriction to marriage duration) provided that any of spouses didn'treach 30-year age (Kosacheva, 1990).

In modern psychology the marriage satisfaction most of researchers mark out a s a keypsychological parameter of family wellbeing, through which difficult mechan isms of dynamicsand functioning of a family become clear.

Usually the marriage satisfaction is defined as inner value judgment, the spous es' attitude totheir marriage, which develops as result of adequate realization of ide a (image) of a family, whichperson developed in his mind under the influence of var ious events making his experience (realor symbolical) in this field of activity. Marri age satisfaction let the person to be sure that he isempathized, will be helped to solv e problems and overcome a difficult life situation (Golod,1984). Family is a special s ystem of the person relations with the world that assumes a problemof marriage sat isfaction in the angle of methodological questions dealing with the personinteraction in space of the standard situations subject to a cultural context including a family context (Bayanova, 2009, 2011, 2013).

After V. Stolin and S. Pantileev we determine the self-relation concept as "the direct and phenomenological expression (or representation) of "Me" for the person lying on his mindsurface. Thus specifics of "Me" experience are derivative of the person real life, his objective position in society" (Stolin & Pantileev, 1989).

The psychological gender is considered as a dimension of "... the person and the person behavioraccording to the masculinity-

feminity point of view. The masculinity-

feminity is a set of thefeatures distinguishing men and women, phylogenetically giv en properties of mind, which areformed under the influence of social factors" (Lopu khova, 2001).

At the present stage of development of ideas about the person psychological ge ndermanifestations (within orthogonal model) the four main types of psychological gender arehighlighted. ...
