The modification of known method of contour dynamics (CD) used for simulation of evolution and the interaction dynamics of the vortex structures such as FAVR's or *V*-states, and also the examples of the results of modeling of these processes in fluids are presented. Our modification of the CD method enables us to minimize the errors caused by breaks of contours and the errors of the finite differences method used for calculation of time evolution of FAVR's in the CD algorithm. Modification of standard CD algorithm enables also, on a level with modeling of the unit vortices, to study evolution and dynamics of interaction of *N*-vortical systems of the various spatial configurations consisting from FAVR's depending on their degree of symmetry, value and a sign of a vorticity. The results of our numerical simulation enable to conclude that the modified CD method is very effective at studying of the vortex phenomena in media where the interacting local vortical regions take place. The results obtained in our simulations, on a level with their obvious importance for adequate interpretation of the effects associated with turbulent processes in fluids and gases can be useful also at the description of turbulent processes in a plasma.

Biography

Prof. Vasily Yu. Belashov, PhD (Radiophysics), DSci (Physics and Mathematics). Main fields: theory and numerical simulation of the dynamics of multidimensional nonlinear waves, solitons and vortex structures in plasmas and other dispersive media. He is Chief Scientist and Professor at the Kazan Federal University. He is author of 310 publications including 7 monographs.

Dr. Elena S. Belashova, PhD (Physics of Atmosphere and Hydrosphere). Main fields: numerical simulation of the dynamics of nonlinear waves and solitons in complex dispersive media. Presently, she is Associate Professor at the Kazan National Research Technical University named after A. N. Tupolev – KAI. She is author of 50 publications including 2 monographs.

Dr. Oleg A. Kharshiladze, PhD. Mail fields: modeling of nonlinear dynamics and chaos processes in space plasma, radiophysics, earthquakes, application of numerical methods in nonlinear differential equations. He is associated professor at physics department of Iv. Javakhishvili Tbilisi State University. He is involved in international group, working on analytical and numerical analysis of ionospheric and magnetospheric processes (turbulence, shear flows, BBF and others).

Presenting author details

Full name: Vasily Yu. Belashov
E-mail: vybelashov@yahoo.com
Session name/ number: Theoretical Physics and Plasma Physics
Category: Oral presentation
