Abstract

© 2015, Allerton Press, Inc. We show that every measure of non-compactness on a W^* -algebra is an ideal F-pseudonorm. We establish a criterion of the right Fredholm property of an element with respect to a W^* -algebra. We prove that the element $-I$ realizes the maximum distance from a positive element to a subset of all isometries of a unital C^* -algebra, here I is the unit of the C^* -algebra. We also consider differences of two finite products of elements from the unit ball of a C^* -algebra and obtain an estimate of their ideal F-pseudonorms. We conclude the paper with a convergence criterion in complete ideal F-norm for two series of elements from a W^* -algebra.
