Abstract

© 2017, Pharmainfo Publications. All rights reserved. Chronic kidney disease (CKD) is a global problem all over the world. Special attention is paid to the action of natural compounds. This research was aimed to investigate the effect of complex phytochemical preparation (Herba centaurii, Radix levistici and Folia rosmarini) on dynamics of morphological changes in kidney tissue in animals with glomerulonephritis. We found a positive dynamics in the structure of the nephron, which allows us to conclude that its nephroprotective effect is expressed.
