Abstract

Within the framework of the subject and problems of socio-economic geography and regional analyses the question of development of approaches to coordination of general scientific triad components: for formulation of theoretical notions - development of new methods of analyses and modeling - development of methodic and means of methods' realization are discussed. On the base of this, important problems of modern socio-economic geography and regional analyses - management of the region are discussed: 1. Region as an object of management. Territorial approach to the management of the region. 2. Questions of mathematic-geographical modeling of the regional system. 3. Methodic and means of solving tasks of the management of the region.
