Abstract

¹H NMR titration and X-ray diffraction analysis revealed that [Ru(bipy)₃]²⁺ forms an outer-sphere inclusion complex with p-sulfonatothiacalix[4]arene in a ratio of 1: 1 in both aqueous solutions and the solid state. According to cyclic voltammograms and fluorimetric data, the outer-sphere association of [Ru(bipy)₃]²⁺ with p-sulfonatothiacalix[4]arene changes the reversible character of the electrochemical oxidation of [Ru(bipy)₃]²⁺ and lowers its emission intensity. © 2008 Springer Science+Business Media, Inc.
