Abstract

Global educational environment brings together national education systems of different types and levels vary considerably in philosophical and cultural traditions, the level of goals and objectives, its qualitative state. Therefore, we should talk about today world educational space as forming a single body in the presence of each educational system of global trends and maintaining diversity. Studied issues of the growing importance of intellectual work, based on the use of information resources on a global scale and the need for the implementation of operational communications between individual professionals, social and professional groups, communities, individuals, community organizations and states. Considers the role of information and communication in the development of society and the mechanisms for creating a single global information space within the world of education. Substantiates the competence to find information and use it in their work, to give a professional assessment of information requirements to the expert any profile.
