

Methodological approaches to structural-logical analysis of interaction for business cycles

Kazan Federal University, 420008, Kremlevskaya 18, Kazan, Russia

Abstract

© 2019, Universidad del Zulia. All rights reserved. The aim of the study is to investigate methodological approaches to the structural-logical analysis of interaction for business cycles via the use of complex multidimensional methods for constructing differential equations of production functions. As a result, the sentiments of economic agents under the influence of short-term positive impulses in capital markets begin to gain momentum and the expectations of economic agents launch mechanisms for reviving macroeconomic generations in the short-term cycle. In conclusion, the solution of the set task allows us to determine and empirically justify the logic of phase shifts in the cyclical development of the economy.

Keywords

Economic cycles, Expectations, National economy
